Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, drawn to a liquid smoke composition, classified in class 426, subclass 650.
- II. Claims 7-23, drawn to a method of making a casing and the casing, classified in class 426, subclass 135.

The inventions are independent or distinct, each from the other because:

The composition as claimed in Group I could be used in applications other than that recited in Group II. For example, the composition of Group I could be applied directly to a food without a casing as carrier.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status requiring separate searches as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of

record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
